

## HYBRID HOPES TO SUIT BIGGER FARMS

\* The Claydon Hybrid T trailed seed drill shares the firm's patented Direct Strip Till twin-tine system with the linkage-mounted Hybrid seed/fertiliser seeder.

Designed to meet the requirements of 1,000ha-plus farms, it will be available initially

in 6m form although an 8m version is set to follow soon.

With an output of up to 4ha/hour – the 8m will do 5ha/hour, says Claydon – the new model should meet the growing demand for greater output while also placing fertiliser in the ground.
